ANNEX “A” – STATEMENT OF WORK

TITLE: Vegetation/Vista Clearing Services between Canada and the United States Border

SW-1 BACKGROUND

The International Boundary Commission is responsible for the maintenance of an effective boundary line between Canada and the United States. One part of the work is to keep a 6.1-metre (20-foot) wide “vista” clear of trees and brush between the two countries.

Since the purpose of the vista is to demarcate the boundary between the countries, it is essential that it be accurately followed between boundary monuments and that each segment has the appearance of a straight line of even skyline width.

SW 2 – PUBLIC RELATIONS

The required work will be carried out under the authority of the [International Boundary Commission](#), which authorizes access to private property to carry out the work on the vista.

If anyone (for example, Landowners, Parks persons, Land Managers, etc.) should object to any clearing operation, the Contractor is to consult with the Commission’s Field Engineer prior to proceeding in that valley. Any damages to public or private property, caused by the Contractor, shall be the responsibility of the Contractor.

The Customs laws, game laws and environmental laws of both countries must be observed by all of the Contractor's personnel. However, the International Boundary Commission, its agents, employees, etc. do have the authority to cross the boundary in the course of their duties.

SW-3 CONTRACTOR MUST MEET WITH THE PROJECT AUTHORITY (OR HIS AUTHORIZED REPRESENTATIVE) PRIOR TO COMMENCEMENT OF WORK

The Contractor **must** attend a meeting either virtually or in person with the Project Authority (or his authorized Representative) prior to commencement of any contract work, to discuss various aspects of the work; the Project Authority (or his authorized Representative) will contact the Contractor and arrange the time, date and location for the meeting.

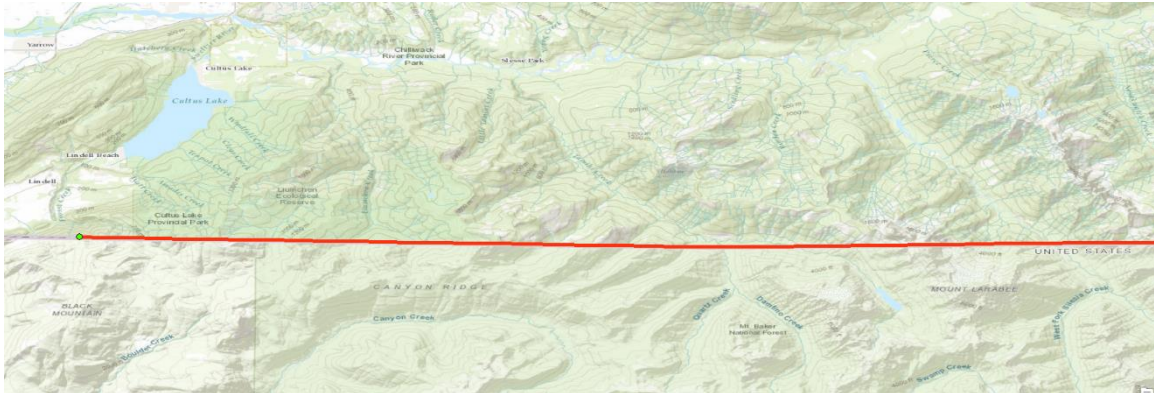

SW-4 SCOPE OF WORK

For estimating the amount of work in this undertaking it is emphasized that old growth at the sides of the vista characteristically have branches of greater than usual length reaching into the vista for light. Where branches extend into the vista from the sides they must be removed either by trimming or by cutting the trees. In either case, this "side cutting" will be the subject of a majority of the work. It is also important that each area be closely examined to determine its location, the terrain and the actual amount of line to be cut.

4.1 Locations of the Areas to be Cleared

The section of the vista to be cleared along the International Boundary between the British Columbia and Washington State extends from a point 60m west of monument 44A and following the boundary easterly.

Approximate coordinates of departure point: $49^{\circ}00'05.2''\text{N}$,
 $122^{\circ}01'45.5''\text{W}$

4.2 Length of Vista to be Cleared

The distance evaluation must be done from the point 60 metres west of Monument 44A going east. It is the responsibility of the Contractor to determine the horizontal distance (Mean sea level) to be cleared including the alpine area.

4.3 Limits of the Boundary Vista

In order to be certain of the location and width of the 6.1-metre (20-foot) vista, the Contractor shall project the boundary line from boundary monument to adjacent boundary monument with a surveyor's transit or theodolite. All monuments may not be intervisible and the ability to establish a temporary intermediate point may be required.

The Contractor **shall** locate the boundary monuments and mark on the ground, the boundary line and vista limits, using brightly painted stakes or bright surveyors' tape tied to a stake, at intervals not exceeding 60 metres (200 feet) in order to provide a straight vista of uniform width. These stakes will be located on both sides of the boundary markers. **The Contractor must clear between the pickets to ensure that a 6.1-metre (20-foot) sky clearance is achieved.**

Stakes shall remain in place until the Project Authority (or their authorized Representative) has carried out the final inspection. Stakes are not required if the area along the boundary is already completely clear such as along fields and roads.

4.4 Cutting Requirements

It is critical to the Contractor that it must make certain that all brush, trees, dead trees and berry canes will be cut with power saws or brush cutters to such a width that at all places the vista will have a clear skyline, for a total horizontal width of 6.1 metres (20 ft), lying 3.05 metres (10 ft) on each side of the boundary line. Including the alpine area.

Understanding that the sides of the vista must be completely free of overhanging branches and trees, it may be required that a considerable number of large trees be removed or alternatively that their branches be trimmed.

All larger trees are to be carefully cut, felling them along the boundary to minimize damage to standing trees on both sides of the vista. No cut trees shall be left leaning or hung up.

Trees on the side of the vista that are damaged during the operation must be cut and then disposed of in accordance with Item 4.5 below.

No stumps shall be left as illustrated in Appendix A attached hereto. The cutting height will be 15centimetres (6 ins) for brush and berry canes, and 30 centimetres (12 ins) for all growth over 20 centimetres (8 ins) in diameter.

4.5 Disposal of Cut Trees

All branches are to be removed from the portion of the tree over 12 centimetres (5 ins) in diameter as well as any large protruding branches on the remainder or on smaller trees. All tree trunks are to be cut and branches removed so that they lie fully in contact with the ground, and away from the centre line of the vista. No trees are to be left perpendicular to the vista.

Special provincial or state requirements in the disposal of cut trees must be followed in the performance of the work. The Contractor shall attempt at all times to avoid having trees or branches falling into or across any roads, trails, fields, ditches, streams or stream beds or other bodies of water. Such debris is to be immediately removed by the Contractor.

The cut trees remain the property of the landowner. No cut tree shall be left leaning or hanging.

4.6 Crew and Equipment

The Contractor shall be responsible to provide the appropriate safety training, as well as all the necessary personnel tools, safety equipment and supplies required to complete the clearing operations. The contractor shall inform personnel of medical facilities and provide a reliable type of communication equipment.

All equipment and machinery shall be capable of performing all work as specified herein. The Commission reserves the right to inspect and approve all equipment to be used under this contract prior to commencement of the work and during the course of the work being performed.

Transportation arrangements (e.g. helicopter support) shall be the responsibility of the Contractor.

4.7 Litters and Operating Refuse

All Contractor gasoline and oil containers, as well as lunch wrappers and litter, shall be carried back from the boundary and disposed of at an approved dump site.

4.8 Protection and Inspection of Boundary Monuments

While operating equipment and felling trees, all precautions shall be taken by the Contractor to protect boundary monuments from damage or disturbance. The Contractor will be held responsible for any such damage or disturbance that it may cause during the clearing operations.

4.9 Preventive clauses for the environmental protection

While on site, the Contractor shall:

- Notify the International Boundary Commission representative of all departures from environmental clauses or, where applicable, the inability to comply with such a clause.
- In choosing the vehicles needed to perform the work, consider the characteristics of the environment (type of soil, waterway, wetland), the time of year and weather conditions, to mitigate environmental impacts.
- Refrain from keeping vehicle engines running unnecessarily.
- Ensure that equipment, construction machinery and vehicles used to perform work are in proper operating condition, that is, free of leaks, defects and malfunctions caused by excessive wear on certain parts, which could release contaminants into the environment.
- Consider noise-related inconveniences and seek to reduce the level of noise. Comply with current environmental noise standards and regulations. Where possible, especially noisy work must be done during normal working hours.
- Ensure that the work areas used are kept clean at all times, by recovering waste, materials, fuels or other substances, and by disposing of them at authorized sites.
- Take all necessary steps to prevent, control and eliminate all forms of contamination or other damage to the environment, in accordance with existing regulations. Have the necessary emergency equipment on hand in case of accidental spills. The contractor is responsible for all damage to the environment resulting from the work done.
- In the event of an accidental spill, regardless of the volume of product spilled, immediately inform the representative of the Commission. Be sure to notify the responsible department and all other government authorities concerned. Contain the spill and confine the product spilled, using appropriate emergency equipment.
- Avoid handling oil or fuel, and filling construction or other machinery less than 50 metres from a waterway or well, unless the quantities of petroleum products concerned are less than 10 litres.
- Store petroleum products at a distance of at least 100 metres from any waterway.
- Refrain from leaving any cut trees or brush in waterways.
- Pile cut saplings and other wood debris above the high water mark.

- Preferably cross over existing bridges and culverts. If there is no existing bridge or culvert, where possible, use only one site for crossing a fordable stream.
- Cross at right angles on solid ground. Prefer locations where banks are the most stable and the waterway is narrow. Place stop logs at the approaches if necessary. Avoid over-compacting banks, since this may result in destabilization

SW-5 CHANGES TO THE PRELIMINARY PLAN/PHYSICAL LOCATION OF CONTRACTOR

It is important that the Project Authority know the location of the Contractor at all times for purposes of inspection, possible border patrol checks, etc. Therefore, any significant change to the Contractor's initial Preliminary Plan estimates for commencement and completion of each of the valleys which would take the Contractor into a location different from that stated in the initial Preliminary Plan must be reported to the Project Authority immediately upon Contractor knowledge of the change. In addition, the Contractor must report to the Project Authority upon completion of the clearing of each area.

SW-6 CONTRACTOR RESPONSIBILITY RELATING TO THE WORK

It is the responsibility of the Contractor to ensure familiarity with the terrain and growth conditions along the area stated in Article 4.1, above "Locations of the Areas to be Cleared" and to complete the work within the time period (currently estimated as from contract award to November 1, 2021) and price, as will be stated in the Contract.

If the Contractor fails to perform any of the provisions of the contract, and does not correct such failure within a period of ten (10) days after receipt of notice from the Project Authority in writing specifying such failure, the Commission will request that Natural Resources Canada issue a "Stop Work Order."
