

Public Works and Government Services Canada	Saskatoon, SK, AAFC, Saskatoon Research and Development Centre, Chiller Replacement, Laboratory Wing	Addendum No. 4 Page 1 of 1
Project No.: R.110563		August 19, 2021

The following changes to the tender documents are effective immediately and will form part of the contract documents:

1.1 PART 3 – QUESTIONS

Question 4: Is there was a way that we could move the support steel to the top of the roof and tie it into the existing building beams through a stub column or something similar. Even if it requires the steel scope to add twice the amount of steel, I still think it will be a more cost effective option with a more linear price method, (for both steel supplier and mechanical/electrical contractors). This will help take some of the risk out of this proposal which will also reduce the amount of contingency budget that the generals would need to carry.

Answer 4: It is the Contractor's responsibility to bid the work as per the contract documents. As per the invitation to tender General Condition 3, Execution and Control of the Work, "the Contractor shall have complete care, custody and control of the Work and shall direct and supervise the Work so as to ensure compliance with the Contract. The Contractor shall be responsible for construction means, methods, techniques, sequences and procedures and for co-ordinating the various parts of the Work."

END OF ADDENDUM NO. 4
