**Q.1:** It appears from the Technical requirements that conductivity is an important requirement. However there is a requirement in C6 that the Vacuum System must include both an aluminum and a non-metallic Recovery Wand for collection of oil and debris that is hand-operated by one person. If the wand is non-metallic conductivity would be compromised. Please confirm this is the intention and that conductivity with the non-metallic wand would not be required.

**Delete:** A.2 Requirement C6 in its entirety.

Insert:

C6	The Vacuum System must include two (2) recovery wands for collection of oil and debris. The recovery wands must be hand-operated by one person. The recovery wands must be non-corrosive, non-magnetic, non-sparking, and conductive with an electrical resistivity less than or equal to 1 megaohm ( $1 \times 10^6 \Omega$ ) per 30.48 metres.
----	---

**ALL TERMS AND CONDITIONS REMAIN UNCHANGED**
