## **Amendment 004 is issued to address the following:**

Bidder Questions:

Question 1:

If our generator, transformer and Distribution panel are all Nema 4 Enclosures, are we able to leave all the gear outside and just run the cable into the building?

Answer 1:

If the provided equipment is NEMA 4, outside is acceptable.

Question 2:

Are the cable to run through Door A and Door B or do you have access holes in the walls to run the cable?

Answer 2:

There are no access holes in the walls. Cables will be run through the doorways and mechanically protected as needed by FMFCS.

Question 3:

When entering Door B, where are the connection points on the load units?

Answer 3:

The room behind door B is 34'-3" long. The units will be lined up back to back with connection points very accessible. The cables will need to be long enough to go from the distribution panel to the last unit which will be no more than 34' away from door B. Distance from door B to the Distribution panel will depend on whether the contractor's plan requires the distribution panel outside or inside. Calculations to determine necessary cable length can be made from the drawing provided in Appendix A – Diagram 2 in the solicitation document.

**ALL OTHER TERMS REMAIN UNCHANGED**
