

Solicitation W8476-216466/001/A Amendment 01 is raised to add the below Solicitation Question and Response(s):

**QUESTION #1:**

Do you need the system to be equipped with Infra-Red?

**ANSWER #1:**

Infra-Red will not be required for the Long Range Telescope (LRT) System.

---

Solicitation W8476-216466/001/A Amendment 02 is raised to extend the term of the contract and required delivery date to 30 Sept 2022.

Delete:

**6.4.1 Delivery Date**

All the deliverables must be received on or before **31 March 2022**

Add:

**6.4.1 Delivery Date**

All the deliverables must be received on or before **30 September 2022**

---

Solicitation W8476-216466/001/A Amendment 03 is raised to add the below Solicitation Question and Response(s):

**QUESTION #2:**

Annex C, section 3.3.9

Can we also propose a hard case to protect the LRT and access?

**ANSWER #2:**

A hard case is not required for the LRT and accessories. A soft case must be provided.

---

Solicitation W8476-216466/001/A Amendment 04 is raised to add the below Solicitation Question and Response(s):

**QUESTION #3:**

Would Canada consider a counter clockwise elevation adjustment just for testing purposes in the interim for the submission samples? If awarded the operational optics provided would all in the required clockwise configuration.

**ANSWER #3:**

Yes, this would be acceptable.

**QUESTION #4:**

If awarded, would Canada consider a 180 days for delivery from date of Purchase Order being issued?

**ANSWER #4:**

Yes, this would be acceptable. Currently, the delivery date is stated as 30 September. However either dates, 30 September 2022 or 180 after contract award, would be acceptable, whichever comes later.

**QUESTION #5:**

With the current optic mount options for submission, would Canada require a 20 MOA base on the mount or would a 0 MOA base be acceptable?

Also, does the mount need to be inline or cantilevered for SEMI-AUTO / AUTOMATIC Weapon systems?

**ANSWER #5:**

Zero MOA is acceptable for the scope mount. Cantilevered scope mount is not required.

---

Solicitation W8476-216466/001/A Amendment 05 is raised to add the below Solicitation Question and Response(s):

**QUESTION #6**

Annex C: 3.2.3.6 Operational Technical Requirements

Would Canada consider a counter clockwise elevation adjustment just for testing purposes in the interim for the submission samples? If awarded the operational optics provided would all in the required clockwise configuration. MEANING: counter clock-wise adjusts the Mean Point of Impact (MPI) up and a rotation clock-wise adjusts the MPI down.

Reason being: We currently have samples available in the counter clockwise configuration that we can submit immediately for evaluation. We would not be able to meet the sample timeline should a clockwise elevation adjustment only be accepted.

**ANSWER #6**

RESPONSE: Previously provided under Question 3.

**QUESTION #7**

Annex C Section 3.2.11.1

Will Canada entertain an optic in flat black for TESTING PURPOSES only for this solicitation process? If awarded we will provide the color Canada deems necessary for their standard operating requirements.

Reason Being: We currently have samples ready for testing and evaluation in order to meet the time line Canada as specified for this solicitation. However, in Flat Black Only. Again, if awarded we will provide the color Canada wishes at that time.

**ANSWER #7**

The Pre-Award Samples (PPS) in flat black will acceptable for bid evaluation.

**QUESTION #8**

Annex C, 3.2.11.1

Would Canada consider the OPTION of a proprietary IR (INFRARED REDUCED SIGNATURE COATING) in an approved color by Canada should we be awarded this solicitation?

**Reason Being:**

This is not a requirement as per 3.2.11.1 of this solicitation. HOWEVER, Canada may wish to consider and amend section 3.2.11.1 of this solicitation to consider this option as this is a state of the art coating that the USA Department of Defence has adopted.

This is a proprietary coating offered by Leupold and Stevens INC. that is being offered to Canada for consideration.

Should Canada wish to amend section 3.2.11.1 of this solicitation for this consideration, we would then be happy to provide a colour sample of this in a Tan/Flat Dark Earth coating for review along with our operational testing samples for consideration.

NB: IR refers to INFRARED as this coating is designed to reduce the optics visual IR signature detection.

**ANSWER #8**

Canada will not accept a proprietary IR coating for this solicitation.
