Lake Minnewanka Boat Launch Replacement – Banff National Park

Amendment 001

This amendment is raised to distribute the answers to bidder questions.

A. QUESTIONS & ANSWERS

Q1 Will the water level of the lake be drawn down so that the toe (lowest point) of the ramp is exposed and not “instream”, prior to the potential start of construction which would be assumed to be near the end of March?

A1 Lake Minnewanka water levels are controlled by a third-party. Parks Canada has no control over the water levels or third-party schedule. Based on the preliminary information provided to Parks Canada, it is anticipated that the water level will be below the toe of the ramp around the week of March 21, 2022. This may be subject to change for reasons outside the control of Parks Canada including weather conditions. All work must be completed in accordance with the Contract Documents.

Q2 If the water level has not been lowered, how long will this take to achieve the desired low water level

A2 Lake Minnewanka water levels are controlled by a third-party. Parks Canada has no control over the water levels or third-party schedule. Based on the preliminary information provided to Parks Canada, it is anticipated that the water level will be below the toe of the ramp around the week of March 21, 2022. This may be subject to change for reasons outside the control of Parks Canada including weather conditions. All work must be completed in accordance with the Contract Documents.

Q3 Does the contract also contemplate that time will be needed to refill the reservoir back up to full level after April 30th? Is this our issue?

A3 No, reservoir filling time is not a required consideration of this Contract. Required milestone and completion dates must be adhered to as noted in the Contract Documents.

Q4 The attached file, shows the precast units that were utilized at our last project. These are a standard item from Lafarge.

- a. Can these be utilized on this project?
- b. These products will be shorter in dimension from the maximum sizing indicated on the plans. If these are used, the ramp would require 3 rows of panels separated by 25mm space at the sides, with a different connection.

A4 Bidders are to tender their bids based on the requirements of the Contract Documents provided. The successful bidder, upon award, may propose revisions and/or alternate designs for consideration and review.

Q5 Would it be acceptable to use a precast panel that is the full width 9144mm x 2000mm wide for the ramp?

A5 Bidders are to tender their bids based on the requirements of the Contract Documents provided. The successful bidder, upon award, may propose revisions and/or alternate designs for consideration and review.
