Amendment #004 to Solicitation No. EP959-211993/B is raised to address the following:

1. QUESTIONS AND RESPONSES:

Question 9: Some of the registries are a bit restrictive on what you can do with the rest of your RECs, so we are a little bit hesitant to commit to putting our RECs on any particular registry, in case that limits what we can do with the rest for our facility. Is there some flexibility on that requirement?

Regarding the supply shortfall regarding the facility unable to meet the supply requirements. At 128,000MWh a year, you would have to replace those with RECs from somewhere in Canada, but they have to be a wind or solar facility built within the last 5 years. Is there flexibility on that, just because supply is limited in Canada on contracted RECs, especially when trying to stick with new built facilities? RECs might be easier to find on older facilities that have ran out on their PPA. That is a risk we have highlighted in our bid.

Response 9: Canada is unable to accept the proposed modification. The requirements for the environmental attributes for the RECs is described in section 5.1.

The criteria in the RFPs are a result of Government of Canada commitments, including the Greening Government Strategy, Pan-Canadian Framework on Clean Growth and Climate Change and PSPC's 2019 and 2021 Minister's mandate letters. The intent of this procurement is to create unsubscribed, new clean electricity capacity, in accordance with Canada's operational requirements.

Question 10: Could you please confirm if this is a fixed price binding RFP?

Response 10: The Basis of Payment in the RFP features firm pricing for a fixed twenty year term, starting at the Commercial Operation Date.

All other terms and conditions remain the same.
