(CSPV)

Annex D – Definitions

Term	Definition
Cyber Security	The protection of digital information, as well as the integrity of the infrastructure housing and transmitting digital information. More specifically, cyber security includes the body of technologies, processes, practices and response and mitigation measures designed to protect networks, computers, programs and data from attack, damage or unauthorized access so as to ensure confidentiality, integrity and availability.
Cyber Threat	A threat actor, using the internet, who takes advantage of a known vulnerability in a product for the purposes of exploiting a network and the information the network carries.
Deficiency	An error or omission resulting in a requirement not being satisfied.
Enterprise IT Security	It is cyber security applied to the Information Technologies (IT) under an enterprise control. The enterprise is a large organisation managing hundreds of IT devices.
Preliminary Evaluation Notice (PEN)	A notice sent to Respondents from Canada informing them of the status of Phase 1 of the ITQ. Also used by Canada to identify those requirements which Canada has determined the Preliminary Response does not meet the requirement(s).
