(*Standing Offer Authority will indicate the day of the week as selected by the Offeror in Part 3, Section II.C, Unit Price Adjustments*)

**5.1.1** An adjustment to the firm unit prices per litre will be calculated as indicated hereunder:

- a) Initial Adjustment: the unit price adjustments effective on April 1, 2021 will be equal to the applicable Reference Marker price for the week ending March 26, 2021 ("B" week value) minus the applicable Reference Marker price for the week ending November 27, 2020 ("A" week value) plus the offer price;
- b) Subsequent Weekly Adjustments: the unit price effective on day of the week identified above for every subsequent week will be equal to the Reference Marker price for the previous week minus the 'A' week value Reference Marker price plus the Offer price.

**5.1.2** For Reference Markers, "NYH", "USGC" and "LA PIPELINE", the average weekly assessment will be:

- a) converted from U.S. funds to Canadian funds using the week average of the Bank of Canada official exchange rate for the corresponding week;
- b) converted from U.S. gallon to litres using 3.785412 as the conversion factor.

**5.1.3** The Reference Marker price converted to Canadian dollars per litre will be rounded to four decimal places to the nearest hundredth of a cent per litre (\$0.0001/litre). Not considering any resultant value in the sixth decimal place, the fifth decimal place will be rounded as follows; less than or equal to \$0.00004 rounded down, \$0.00005 - \$0.00009 rounded up.

**5.1.4** Example calculation using the "LA PIPELINE" Marker:  
(*All prices indicated are for example purposes only*)

Related "LA PIPELINE" marker price for week ending September 9, 2016 = \$ 1.8713

Related "LA PIPELINE" marker price for week ending September 16, 2016 = \$ 1.7886

Bank of Canada official exchange rate for week ending September 9, 2016 = \$ 1.1190 per U.S.dollar

Bank of Canada official exchange rate for week ending September 16, 2016 = \$ 1.1209 per U.S.dollar

Litres in a US gallon = 3.785412

- a)  $(\$ 1.8713 \times \$ 1.1190) / 3.785412 = \$ 0.553172$  rounded to Cdn.\$ 0.5532 per litre
- b)  $(\$ 1.7886 \times \$ 1.1209) / 3.785412 = \$ 0.529623$  rounded to Cdn.\$ 0.5296 per litre
- c) b) minus a) = decrease of \$ 0.0236 per litre
