OPTION PERIODS:

For the provision of professional services after the Initial Contract Period, if Canada exercises its option to extend, the Firm Per Diem rates for each option period will be determined at the time of the option to be exercised, based on the following formula:

Firm Per Diem rates for the previous year X (1 + percentage change* in the Statistics Canada Average weekly earnings by industry, annual report, Table 14-10-0204-01 Professional, Scientific and Technical Services [54,541] labour category between the two calendar years preceding the option period to be determined

* the percentage change will be rounded to 5 decimals.

Example: option period one exercised in calendar year 2020:

	Canada (map)	
	All employees ⁵	
	Including overtime	
North American Industry Classification System (NAICS) ⁴	2018	2019
	Current dollars	
Professional, scientific and technical services	1,385.53 ^A	1,439.18 ^A

$$\frac{(\text{Average weekly earnings in 2019} - \text{Average weekly earnings in 2018})}{\text{Average weekly earnings in 2018}} = \% \text{ increase or } (\% \text{ decrease})$$

$$(\$1,439.18 - \$1,385.53) / \$1,385.53 = 0.0387216 = 3.87216 \%$$

Therefore, in this example, the rates for year five would be multiplied by 1.0387216 to arrive at the option period one Firm Per Diem rates.

In the event that the calculation of the formula above results in a “% decrease”, the Firm Per Diem rate for the option period will be determined as follows:

Firm Per Diem rates for the previous year, multiplied by 1.000000.

Note: In order to ensure the Contractor does not benefit from a greater increase as a result of the calculated Firm Per Diem not being reduced even though the formula results in a % decrease, the calculated % increase for the next period will be reduced by the % decrease from the previous year.

For example: If the % decrease for option period one was calculated as **-.0152345** and the % increase for the option period two is calculation as **+.0345614**, then the rates in option period one would be multiplied by 1 + (.0345614 - .0152345) which equals 1.0193269.
