The amendment to the bid solicitation is to address the enquiries received:

Response(s) (R) to Question(s) (Q):

Q1. We feel that Environment and Climate Change Canada is significantly limiting the options by requiring experience in GHG reduction for mining operations related to critical minerals used in electrification and battery production (Mandatory requirements M2 and M3).

Are you open to considering GHG reduction experience with mining operations for other metals and minerals beyond those used in electrification and battery production?

R1A For **Mandatory Criteria M2**, Environment and Climate Change Canada is only considering GHG reduction experience from critical mineral mining and processing facilities that involve critical minerals used in electrification and battery production. Note this criterion applies to at least one **member of the project team**.

R1B For **Mandatory Criteria M3**, Environment and Climate Change Canada **is considering** GHG reduction experience that involves critical minerals beyond those used in electrification and battery production, as the experience requirement applies to the overall critical minerals mining and processing sector. Note this criterion applies to the **Project Manager's** experience.

All other terms and conditions of the Bid Solicitation remain the same.
