Title:
Miette Water Tank Replacement - Miette Hot Springs

Amendment 002

This amendment is raised to:

- A. Answer questions from bidders.

A. Questions and Answers

Q1. My steel fabricator is asking the following question regarding the material for the new tank: May we propose 316 stainless steel instead of epoxy coating the tank (don't have to worry about coating damage on install and cost would probably be similar)? Can you please find out if this is something the engineers would approve?

A1. As per the specifications, the chlorine levels in the tank can get up to 55 mg/L upon entry. Stainless steel is not compatible with this and not an acceptable alternative. Please note that it is critical that a suitable coating is selected to withstand the water quality within the tank.

ALL OTHER TERMS & CONDITIONS REMAIN UNCHANGED.
