## **SOLICITATION AMENDMENT 004**

This Solicitation Amendment is raised to:

1. Answer questions from industry
- 

### **1. QUESTIONS AND ANSWERS:**

#### **Question 1**

The corrosion resistance of hydraulic hose fittings does not have anything to do with galvanic corrosion (corrosion between dissimilar metals), but rather their exposure to salt water. Standard Zinc fittings on the hydraulic hoses will rust when exposed to salt water, Stainless Steel fittings on the hydraulic hoses will not rust. Please confirm that CCG is OK with having their hydraulic hose fittings susceptible to corrosion after exposure to salt water, and that any corrosion of the standard zinc fittings will not become a warranty item or deficiency for the supplier

#### **Response to Question 1**

The hydraulic hose fittings must resist corrosion, as per requirement C.5 which states "All materials used in fabrication must be new, unused and free from defects and imperfection that might affect the serviceability of the finished product; **resist corrosion and wear under the environmental conditions specified**; and sized or selected to satisfy all the performance requirements specified". The environmental conditions specified in Section A.1. include both freshwater and saltwater (See A.1.2). If the standard Zinc fittings will rust when exposed to saltwater, another corrosion resistant material (such as stainless steel) must be used.

**All other Terms and Conditions remain unchanged**
