

RFP-2023-24

**Development of Technical Guidance to Advance Surface
Temperature and Air Temperature Mapping in Canada.**

QUESTIONS AND ANSWERS #3

- Q1:** Does Canada want air temperature and surface urban heat islands to be reviewed together, or separately (i.e., in the literature review portion)? They are distinct, yet related, phenomena, that require different observational approaches, and have very different implications for human life (health, energy, comfort).
- Answer:** Air and surface temperatures should be treated and researched as separate methodologies in the literature review, although they may have some overlapping characteristics.
- Q2:** Would Canada allow another 2-week extension so that we can better address this in our proposal?
- Answer:** The closing date has been changed to March 5th, 2024 at 16:00 EST and the period for submitting questions has been extended to February 26th, 2024 at 12:00 EST.
